I randomly run 10 times with the different scenario automatically.

Step 1: I desgined some type of serial number to insert the textbox. The program will randomly choose one from the pool ('1863552437', '123', '186355243a', '!@#4', '0021!', '186355243!', '1863552417').

step2: click get info button

Step3: check the corresponding message. I list three type of the message as below.

Case: insert “1863552437”, check device info
